Infrastructure Provider
Private Companies

NEW STAKEHOLDERS

Project INDIMA will develop and enhance a network-concept for better and holistic civil protection and disaster risk management by integrating all relevant stakeholders in pre-planned joint preparedness and response activities to establish a tangible network.

Objective is to develop a concept to optimise the cooperation and improve the coordination among a wide range of governmental and non-governmental, civil and military as well as public and private stakeholders.

Go digital: online and VR based

Contemporary digital tools like online survey systems, videoconferences, and social media are used for the preparation and execution of the INDIMA project.

Important online meetings will be open as Livestream and recorded to be part of the project documentation and dissemination.

New opportunities with Information and Communication Technology entities for the implementation of digital tools are tested and strengthened.

Virtual-reality-based simulations are part of the simulation exercise.

- ✓ It is the aim of the project to develop a checklist to organise
- ✓ the integrated disaster management with multiple stakeholders,
- ✓ **The consortium has designed this project in a contemporary style,**
- ✓ **Most project-related activities will be executed online,**
- ✓ The needs assessment will be done online, necessary clarifications will follow by using phone calls and e-mail,
- ✓ The three workshops will be also conducted as videoconferences to give as many as possible experts the opportunity to participate,
- ✓ Only pre-exercise meeting, the SIMEX itself and the final workshop will be with physical attendance.

Project Phases

Digital!

Stakeholder Analysis

The analysis should identify all relevant actors (stakeholders), their roles and responsibilities, as well as mapping the interrelations of crisis management actors in disaster response.

01

Digital!

Online Survey

Main aim is to assess how the various actors work together, identify the existing critical tools, and to identify the existing critical tools, and to identify the existing critical tools.

02

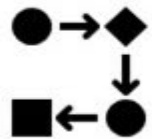

Digital!

A: VR supported table-top exercise
B: full virtual SIMEX with online participants

New learning opportunities for Simulation Exercises

Testbed for new training setups:

- ❖ Online course and
- ❖ VR based TTX or
- ❖ Online trainings with TTX

VR Simulation Exercise (SIMEX)

VR (virtual reality supported) simulation table-top exercise with all actors for 3 days to simulate the mission cycle, to test the implementation of the developed checklists and to gain knowledge for the practise.

04

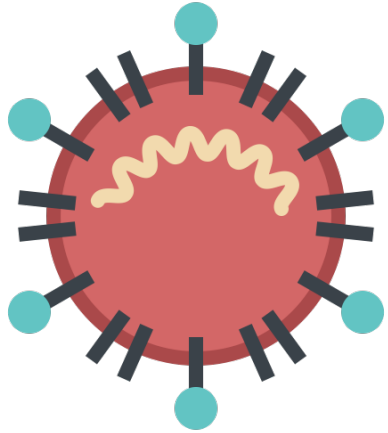

Final Concept/Checklist

From the findings of the workshops and the SIMEX, a final workshop will be organised with the aim to identify learnings of the update of the recommendations and to publish a final checklist.

05

Challenge

SIMEX worst case scenario (Timișoara):

Travel restrictions are in place, or participants cannot travel, or a new quarantine is issued

Task: adept the SIMEX setup from a table top exercise into a fully virtual online-conducted simulation exercise:

- move travel budget to software and maybe subcontracting,
- it is time critical because new planning has to be done and new arrangements need to be established in advance.

Invitation:

Join our advisory group as an expert!

In the implementation of the project INDIMA, experts will have a particularly important role:

- participate at the advisory group to evaluate the projects progress and results and have active access to all online workshops,
- contribute to their relevant field of expertise to crosscheck the activities and get advice for a successful project development,
- INDIMA experts will get the experts' kit, the project newsletter and access to all project related data, publications and project results and outcomes,
- Great exchange and network opportunity for CP and DR experts.

Invitation:

Call for express of interest

mail us and you get the
info package for the
pool of experts!

How to get in contact

To participate at the advisory group, to evaluate the projects progress and results and have active access to all online workshops, and update of news:
